COMMUNITY UPDATE MARCH 24, 2017

WATER DISTRIBUTION SYSTEM FLUSHING

Notice to the water users in the downtown Campbell River area

The City will flush water mains from March 20 to March 31, 2017 from 10 p.m. to 6 a.m. in the downtown Campbell River area.

This procedure is part of regular preventive maintenance to remove sediment that gradually deposits in the water pipes.

During the flushing process, temporary water interruptions will occur and water pressure could be reduced. City staff will work to minimize any inconvenience.

No change in water quality is anticipated, and this work presents no health risks.

Periods of discolouration may take place during flushing. Reducing water use during flushing hours will help minimize the amount of sediment and discolouration introduced into the water system.

In the event of cloudy or discoloured water, **run the cold water tap – ideally a bathtub – for 15-20 minutes** or until the water clears.
