

# FAQ's: Waterfront Sewer Upgrade Project

The Waterfront Sewer project is part of the overall Waterfront Project 2018-2020, which will see a series of upgrades along the Highway 19A corridor between Maritime Heritage Centre and Rockland Road. In December 2018, Phase 1 of the Waterfront Sewer Project was completed, with Phase 2 set to begin in spring 2019.

1. **What is the project?**

The completed project will see the installation of a new sewer main between Maritime Heritage Centre and Big Rock Boat Ramp, plus three new lift stations. This work will both replace aging infrastructure as well as expand capacity on the system to allow for projected growth in Campbell River, particularly in the Willow Point and Jubilee Heights areas. Repaving will be completed once the underground infrastructure is installed.

2. **When is construction happening?**

Phase 1 of the project, sewer main installation between Maritime Heritage Centre and 1st Ave, was completed in December 2018. Phase 2, sewer main installation from 1st Ave south to Big Rock Boat Ramp, is scheduled to begin summer 2019 and be complete by late fall. In 2020, three new lift stations will be constructed off roadways, to wrap up the waterfront sewer work as the final phase.

3. **How much will this project cost?**

Construction for Phase 1 of the Waterfront Sewer Upgrades project cost \$4.5 million, and Phase 2 will cost \$4.3 million. The final phase – lift station construction – will cost \$3.45 million. The project is funded by a Sewer Capital Reserve and long-term borrowing.

4. **Who's doing the work?**

Engineers from Stantec Consulting are leading the design for the project, with local support from Highland Engineering Services. The upcoming construction for Phase 2 of the project will be completed by Wacor Holdings Ltd.

5. **Will traffic on the highway be impacted?**

The City and its contractor aim to maintain as much traffic flow as possible, although drivers should expect intermittent periods of single-lane alternating closures. As with all construction work, traffic will slow during this period and drivers should allow time to move through the construction zone safely. Using alternative routes is encouraged (see map on Pg.2).

6. **What will happen to the old pipe?**

The existing sewer main will remain operational until all installation/testing of the new system is complete. It will then be flushed, sealed, filled with a concrete slurry mix and left in place.

# FAQ's: Waterfront Sewer Upgrade Project

7. **Which direction will work move?**

Construction is expected to generally move from south to north along Highway 19A this summer.

8. **Can I use the seawalk during construction?**

The popular seawalk trail will remain open during construction, though there may be periods of temporary rerouting at narrower portions of the road. If travelling the seawalk over the summer, watch for detour signs to stay safely out of the construction zone.

9. **How does this work align with the wider Waterfront Project 2018-2020?**

In 2019, construction on the Waterfront Sewer project will happen simultaneously with a section of the underground portion of the Phase 3A Highway 19A Upgrades. While residents will travel through a single work zone, this construction technically represents two projects. Learn more about the Phase 3 Highway 19A Upgrades at [www.campbellriver.ca/highway19Aupgrade](http://www.campbellriver.ca/highway19Aupgrade).

10. **How can I learn more?**

## Alternative Routes Map 2019

Through the summer, the highway will remain open and we encourage you to support businesses along the corridor. If you're in a hurry though, and want to avoid traffic disruptions, here are some alternative route options to consider.
